

GUARDIAN

Core Security

Managed Anti-Virus and Patch Management

KEY FEATURES

Enterprise Class Solution

Encompassing more than just Anti-Virus, Guardian offers complete endpoint security

Advanced Proactive Technology

Guardian can detect and deploy the latest security patches for your Windows system software and third party applications

Software Firewall

Allows laptops outside the office network to be fully protected

Comprehensive Reporting

A wide range of monthly reports is available to ensure you always know what's going on

Fully Monitored System

Guardian monitors your entire PC environment to ensure it remains healthy and protected, allowing us to act quickly if there's an issue

THREATS FACING SMBs TODAY

- Email Worms
- Network Viruses
- Spyware
- Data Theft
- Phishing Attacks
- Email Spam and Malware

- *Over 32% of all computers in the world are infected with some type of malware.*
- *57% of malware can be classed as viruses, capable of copying themselves and spreading to other files.*
- *21% of malware are Trojans that disguise themselves as a normal file or program.*

Total Endpoint Security for Your Business

What's worse than a Virus?

The time and money you waste recovering from one!

Guardian provides you with the first line of defense against malware and security threats resulting from outdated Anti-Virus software and unpatched systems. And all at a price that's easy on the budget.

Every minute counts in today's fast-paced business environment. So, stop wasting your valuable time and energy on the planning, selection, deployment, testing and updating of your Anti-Virus software.

And don't leave the safety and security of your network environment in the hands of your employees by holding them responsible for ensuring their PCs are continually updated with the latest Windows security patches. Keeping your workstation environment up to date and secure can be time-consuming and costly if not handled properly!

Guardian Core Security provides you with the skilled IT resources and enterprise-class security software you need to ensure ongoing protection of your PCs against the ever present threat of virus and malware attacks that can result from outdated Anti-Virus software and unpatched PCs.

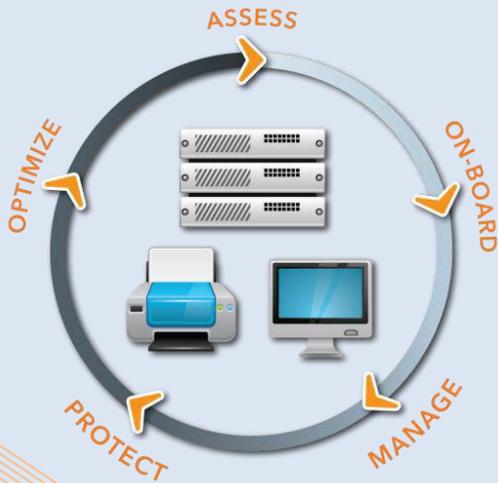

Benefits of the Guardian Core Security Solution

- **Fully Managed Solution for little more than the cost of your Anti-Virus Software!**
Guardian is enterprise class endpoint software, monitored by us 24/7, and managed by a team of technical experts that will provide you with regular reports to ensure you can see that the devices in your business are protected at all times!
- **Reduce Operating Costs**
One security incident or an unpatched computer can prevent your employees from being 100% productive, which affects your bottom line. A virus can hit many machines and take time to eradicate. Remove these risks, and it will save you money!
- **Protect Your Company's Critical Assets and Information**
Combining our award-winning Anti-Virus software with our patch management service will ensure an additional layer of protection against all types of malware, targeted attacks and internet threats. We'll ensure all your Microsoft applications and platforms, as well as your 3rd Party applications, remain up to date with the latest patches.
- **A Flexible Security Solution**
Guardian's advanced security features offer the appropriate security for any sized company and network.
- **Total Peace of Mind**
Buying an Anti-Virus solution, installing it, and then relying on everyone to keep it updated is no longer a sound business practice. With Guardian, you can rest assured all your servers, PCs and laptops are protected and that a group of dedicated experts is taking care of it for you 24/7.

Device Lifecycle Management

“Almost 50% of SMBs will shut down external network access during serious external attacks; for many SMBs, this can cause crippling revenue loss.”

Gartner

Bitdefender

The Guardian Managed Anti-Virus service utilises multi award winning Bitdefender technology.

Why our clients choose Guardian Core Security

Unmanaged Anti-Virus Software:

- Provides a point solution to specific issues
- Requires manual monitoring and maintenance to remain current and effective
- Relies on end-user decisions for operation
- Doesn't provide consistent version control across devices
- Doesn't provide centralised management or reporting

Guardian Managed Anti-Virus:

- Provides proactive and comprehensive security, monitoring and management
- Centralises the deployment and updating of software to ensure coverage and consistency
- Automates management processes to avoid errors and reduce costs
- Leverages expert IT skills
- Monthly Status and Threat reporting shows you're continually protected
